ggCircuit SpecOps Support Services

From simple software management solutions and PXE Boot Server set up to full hardware and software build outs, the team at ggCircuit is fully invested to help you realize your esport center goals. With a dedicated and experienced team supported by industry leading esport center management software solution ggLeap, ggCircuit is set up to help you with all aspects of setting up your center including: financial planning; center design; technical set up and support; operations; training center staff and ongoing operating support.

Case Study 2: Rose Hulman Institute of Technology

Cost: $75,000

Space: 603 sq ft

Number of Stations: 26

Project Included: Design, Hardware, Software, Furniture, Licenses, Fees, Installation, Electrical & Networking

Summary: Rose Hulman had been thinking about doing a one off esport event since 2016 and so kept in touch with the ggCircuit team over the years. In 2018 they decided that they wanted to trial an esport center on campus. With limited space available the team was challenged to come up with a efficient layout to maximise the possible gaming stations that could fit into the 603 sqare foot space. After the original budget of $135,000 was cut almost in half, the team adjusted and came up with a very efficient and cost effective solution that allowed for maximum gaming stations with functional set up. The Rose Hulman team hope to add to this initial pilot space in the future.

Outcome:

- 20 PCs with monitors + peripherals
- PXE Server
- ggLeap software, games + maintenance support
